Abstract: PURPOSE: To remarkably improve the activity of a chemotherapeutic agent in the treatment of tumor by combining the agent with a specific immunomodulator.

CONSTITUTION: The activity of a chemotherapeutic agent in the treatment of tumor is remarkably improved by using an immunomodulator selected from interferon and interleukin-2 in combination with an immunomodulator selected from thymic hormone (e.g. α -thymosin or thymopentin) and prostaglandin. The chemotherapeutic agents especially useful for the combined use with the above immunomodulators are e.g. cyclophosphamide, 5-fluorouracil, carmustine, adriamycin, decarbazine and cisplatin.
